

# INFO 330 Final Project

Noah Andrew McMahon

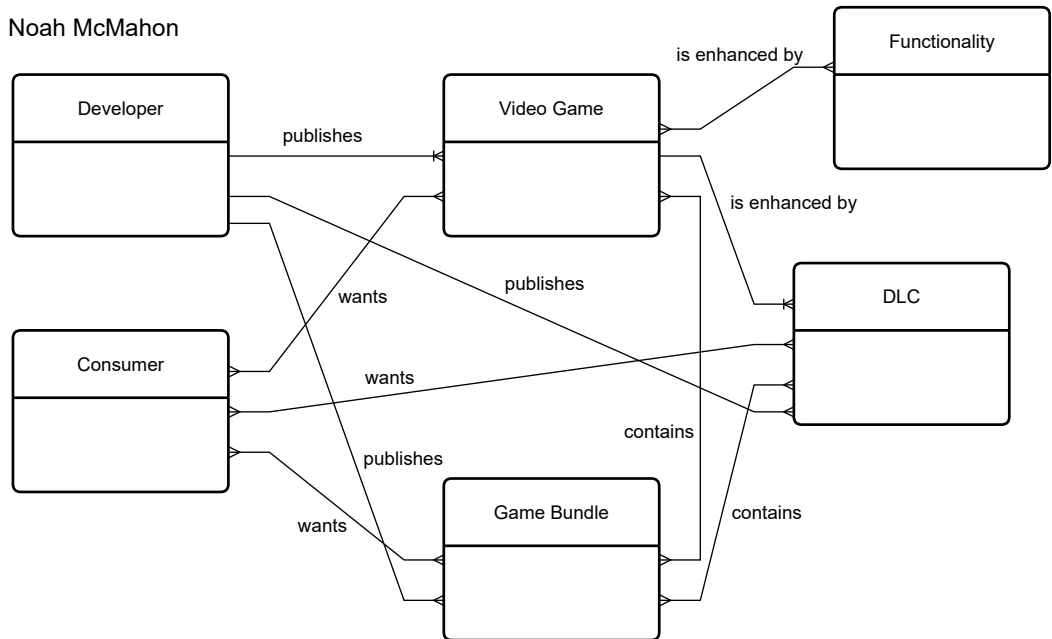

December 8, 2023

## 1 Phase 1:

Nintendo is one of the top video game companies in the world. This company both produces games themselves for their platforms (ranging from the Nintendo 3DS to the Wii U to the Nintendo Switch) as well as hosts games from other developers on their consoles. The incredible amount of video games that exist on these consoles, specifically the Nintendo Switch (the console that I will be looking at), it is sometimes difficult to find the games that a consumer might want to play. This is the main issue that I will be looking at for this database.

The first entity for this Nintendo game database would be a video game entity. This entity would have attributes such as title and price, among others. Each video game would be published by a developer, but one developer can publish numerous video games. This second entity would be a developer entity, with attributes such as developer name and general genre. A third entity would be a DLC entity, with attributes such as title and price. A game can have multiple DLCs, but a DLC can belong to only one game. The fourth entity would be a customer entity, whose attributes may include name, address, and payment information. A customer can own and play numerous games and their respective DLCs. A fifth entity would be game bundles, whose attributes would include the title of the bundle as well as the price. A game bundle can have many games and DLCs as part of it, and a game or a DLC could be part of different bundles. The sixth and final entity would be functionality entity, which would cover the differing number of players each video game has in its differing modes. Some attributes of this entity would be minimum players and maximum players.

Noah McMahon

## 2 Phase 2:

The logical model as well as the relational schema is being turned in with this project.

## 3 Phase 3:

The file in which I set up and dumped all my data is also being in turned in with this project.

## 4 Phase 4:

USE nintendo\_game\_db;

```
-- Prompt 1: --  
-- Create a function that returns a "wish" list of all of the video games, DLCs,  
--  
-- and game bundles that match a consumer's favorite genre. --
```

```
GO  
CREATE FUNCTION fnWishList(@username VARCHAR(50))  
    RETURNS TABLE  
    RETURN  
        (SELECT vg.game_title, d.DLC_title, gb.bundle_title  
        FROM Video_Game vg  
        JOIN DLC d  
        ON vg.game_title = d.game_title  
        JOIN DLCToGameBundle dgb  
        ON d.DLC_title = dgb.DLC_title  
        JOIN Game_Bundle gb  
        ON dgb.bundle_title = gb.bundle_title  
        WHERE vg.genre1 = (SELECT fav_genre FROM Consumer WHERE user-  
name = @username)  
        OR vg.genre2 = (SELECT fav_genre FROM Consumer WHERE username  
= @username)  
        OR vg.genre3 = (SELECT fav_genre FROM Consumer WHERE username  
= @username));  
GO
```

```
SELECT *  
FROM fnWishList('Poohbear')
```

Results Messages

	dev_name	num_games	num_DLCs
1	Nintendo	26	30
2	SEGA	6	6
3	Team17	2	6
4	SQUARE ENIX	2	0
5	Devolver Digital	1	3
6	Ubisoft	1	3
7	BANDAI NAMCO Entertainment	1	2
8	Game Mill	1	2
9	StudioMDHR	1	1
10	Supergiant Games	1	0
11	Team Cherry	1	0
12	Hello Games	1	0
13	Innersloth	1	0
14	Mojang	1	0

This SQL query returns the number of DLCs and the number of video games that each developer produced. The results of the query shows that Nintendo has produced a vast majority of both the video games and the DLCs in the database.

- Prompt 4: –
- Create triggers to set the price of video games, DLCs, –
- and game bundles to NULL if a negative price is inputted. –

```
GO
CREATE TRIGGER Video_Game_UPDATE_INSERT
ON Video_Game
AFTER UPDATE, INSERT
AS
UPDATE Video_Game
SET price = NULL
WHERE price < 0
```

```
GO
CREATE TRIGGER DLC_UPDATE_INSERT
ON DLC
AFTER UPDATE, INSERT
AS
UPDATE DLC
SET price = NULL
WHERE price < 0
```

```
GO
CREATE TRIGGER Game_Bundle_UPDATE_INSERT
```

```

ON Game_Bundle
AFTER UPDATE, INSERT
AS
UPDATE Game_Bundle
SET price = NULL
WHERE price < 0

```

```

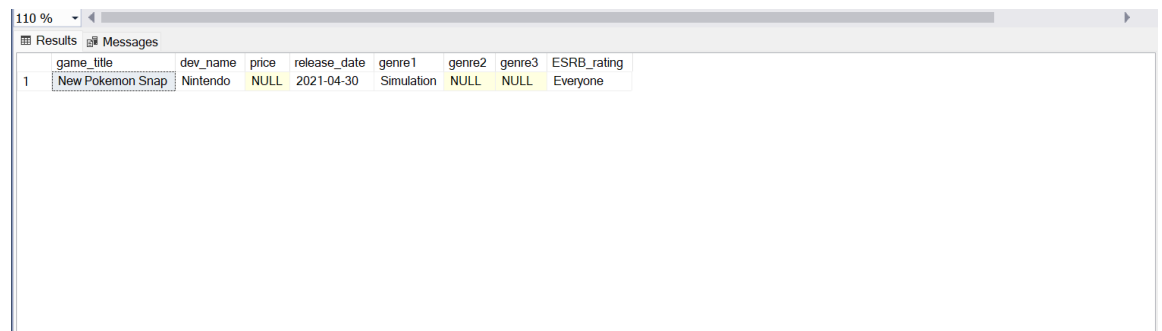

INSERT INTO Video_Game(game_title, dev_name, price, release_date, genre1,
genre2, genre3, ESRB_rating)
VALUES('New Pokemon Snap', 'Nintendo', -59.99, '04/30/2021', 'Simulation',
NULL, NULL, 'Everyone')

```

```

SELECT *
FROM Video_Game
WHERE game_title = 'New Pokemon Snap'

```

The screenshot shows a database query results window with a zoom level of 110%. The window has tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with the following data:

	game_title	dev_name	price	release_date	genre1	genre2	genre3	ESRB_rating
1	New Pokemon Snap	Nintendo	NULL	2021-04-30	Simulation	NULL	NULL	Everyone

This trigger shows that if an impossible price (a price below zero) is entered as a video game, the price is set to NULL. This is important as it makes sure that no bad price attribute data gets entered into the database.

```

INSERT INTO DLC(DLC_title, game_title, dev_name, price, release_date,
ESRB_rating)
VALUES('Extra Pokemon Snap', 'New Pokemon Snap', 'Nintendo', -9.44, '05/07/2021',
'Everyone')

```

```

SELECT *
FROM DLC
WHERE DLC_title = 'Extra Pokemon Snap'

```

	DLC_title	game_title	dev_name	price	release_date	ESRB_rating
1	Extra Pokemon Snap	New Pokemon Snap	Nintendo	NULL	2021-05-07	Everyone

This trigger shows that if an impossible price (a price below zero) is entered as a DLC, the price is set to NULL. This is important as it makes sure that no bad price attribute data gets entered into the database.

```
INSERT INTO Game_Bundle(bundle_title, dev_name, price, release_date,
ESRB_rating)
VALUES('New Pokemon Snap Expansion (Game + DLC)', 'Nintendo', -75.00,
'03/24/2022', 'Everyone')
```

```
SELECT *
FROM Game_Bundle
WHERE bundle_title = 'New Pokemon Snap Expansion (Game + DLC)'
```

	bundle_title	dev_name	price	release_date	ESRB_rating
1	New Pokemon Snap Expansion (Game + DLC)	Nintendo	NULL	2022-03-24	Everyone

This trigger shows that if an impossible price (a price below zero) is entered as a game bundle, the price is set to NULL. This is important as it makes sure that no bad price attribute data gets entered into the database.

```

    – For Resetting the Database Without those Trigger Test Values –
DELETE FROM Video_Game WHERE game_title = 'New Pokemon Snap'
DELETE FROM DLC WHERE DLC_title = 'Extra Pokemon Snap'
DELETE FROM Game_Bundle WHERE bundle_title = 'New Pokemon Snap
Expansion (Game + DLC)'

```

```

    – Prompt 5: –
– Create a function that returns the number of players –
– for a designed video game. –

```

```

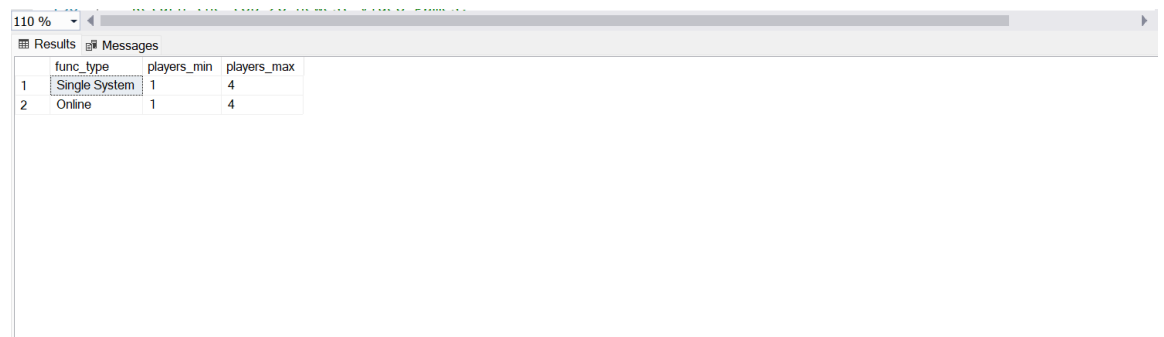

GO
CREATE FUNCTION fnNumPlayers(@game_title VARCHAR(50))
    RETURNS TABLE
    RETURN
    (SELECT f.func_type, f.players_min, f.players_max
    FROM Functionality f
    JOIN VideoGameToFunctionality vgf
    ON f.func_id = vgf.func_id
    WHERE vgf.game_title = @game_title);
GO

```

```

SELECT *
FROM fnNumPlayers('Super Mario Bros Wonder')

```

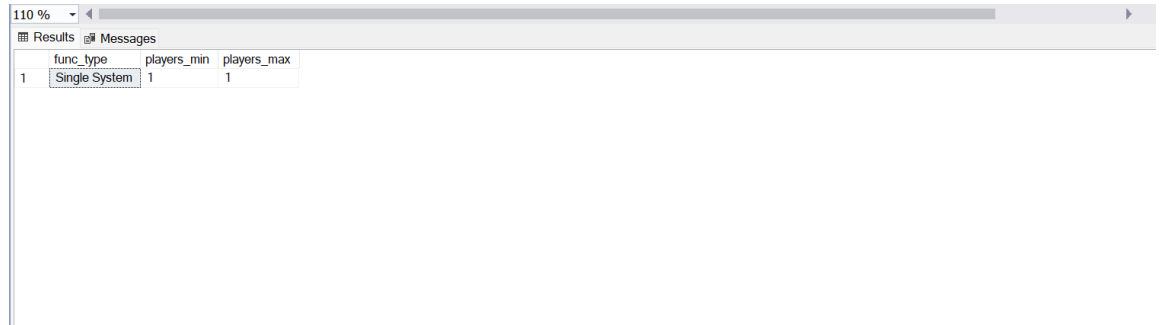

The screenshot shows a SQL query results window with a zoom level of 110%. The window has tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with three columns: 'func\_type', 'players\_min', and 'players\_max'. There are two rows of data: 'Single System' with values 1 and 4, and 'Online' with values 1 and 4.

	func_type	players_min	players_max
1	Single System	1	4
2	Online	1	4

This function returns a table with the functionality or number of players for 'Super Mario Bros Wonder' for all different play styles of said video game. This is very important as consumers may be interested in which games they can play

online or with their friends.

```
SELECT *  
FROM fnNumPlayers('Super Mario RPG')
```

110 %

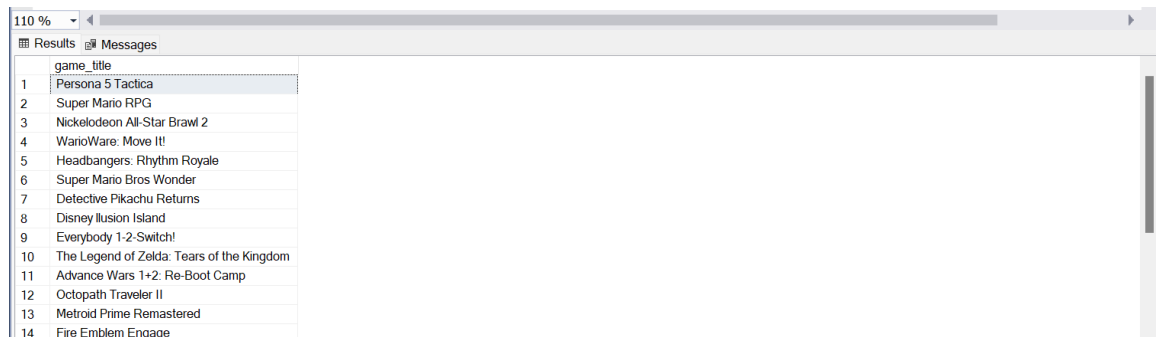

Results Messages

	func_type	players_min	players_max
1	Single System	1	1

This function returns a table with the functionality or number of players for 'Super Mario RPG' for all different play styles of said video game. This is very important as consumers may be interested in which games they can play online or with their friends.

- Prompt 6: -
- Return the top 20 newest video games. -
- Also, return the top 10 oldest DLCS. -

```
SELECT TOP 20 game_title  
FROM Video_Game  
ORDER BY release_date DESC
```

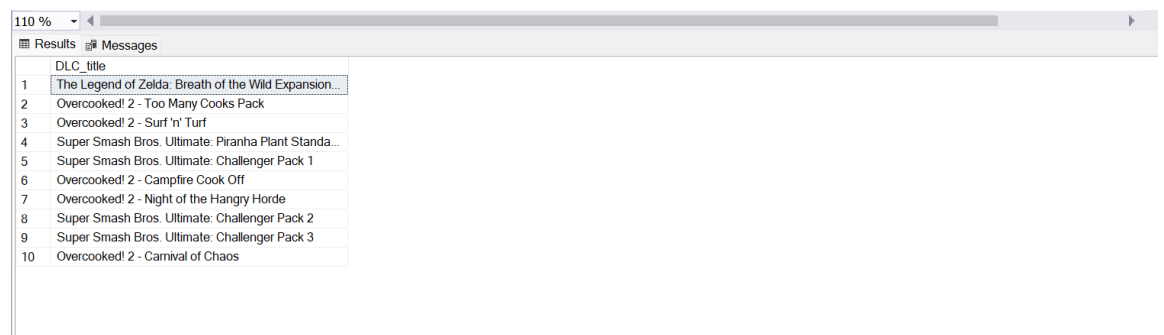

110 %

Results Messages

	game_title
1	Persona 5 Tactical
2	Super Mario RPG
3	Nickelodeon All-Star Brawl 2
4	WarioWare: Move It!
5	Headlanders: Rhythm Royale
6	Super Mario Bros Wonder
7	Detective Pikachu Returns
8	Disney Illusion Island
9	Everybody 1-2-Switch!
10	The Legend of Zelda: Tears of the Kingdom
11	Advance Wars 1+2: Re-Boot Camp
12	Octopath Traveler II
13	Metroid Prime Remastered
14	Fire Emblem Engage

This SQL query returns the top 20 newest video games in order of their release date. This is useful in that it allows consumers to see fresh, new games that they might be interested in with a more current fanbase.

```
SELECT TOP 10 DLC_title
FROM DLC
ORDER BY release_date ASC
```

The screenshot shows a database application window with a zoom level of 110%. The window has two tabs: 'Results' (active) and 'Messages'. The 'Results' tab displays a table with two columns: 'DLC\_title' and an unlabeled column. The table contains 10 rows of data, representing the top 10 newest DLCs by release date.

	DLC_title	
1	The Legend of Zelda: Breath of the Wild Expansion...	
2	Overcooked! 2 - Too Many Cooks Pack	
3	Overcooked! 2 - Surf 'n' Turf	
4	Super Smash Bros. Ultimate: Piranha Plant Standa...	
5	Super Smash Bros. Ultimate: Challenger Pack 1	
6	Overcooked! 2 - Campfire Cook Off	
7	Overcooked! 2 - Night of the Hangry Horde	
8	Super Smash Bros. Ultimate: Challenger Pack 2	
9	Super Smash Bros. Ultimate: Challenger Pack 3	
10	Overcooked! 2 - Carnival of Chaos	

This SQL query returns the top 10 oldest DLCs in the order of their release date. This is useful in that it allows consumers to see DLCs that they might have missed out on.
